

## REISSUE APPLICATION DECLARATION BY THE INVENTOR

Docket Number (Optional)  
75252-058

I hereby declare that:

Each inventor's residence, mailing address and citizenship are stated below next to their name.

I believe the inventors named below to be the original and first inventor(s) of the subject matter which is described and claimed in patent number 6,350,403 granted February 26, 2002 and for which a reissue patent is sought on the invention entitled VISCOSITY STABILIZATION OF RADIATION-CURABLE FILLED COMPOSITIONS the specification of which

☒ is attached hereto.

☒ was filed on 2/26/2004 as reissue application number \_\_\_\_\_ / \_\_\_\_\_  
and was amended on 2/26/2004 .  
(If applicable)

I have reviewed and understand the contents of the above identified specification, including the claims, as amended by any amendment referred to above.

I acknowledge the duty to disclose information which is material to patentability as defined in 37 CFR 1.56.

☐ I hereby claim foreign priority benefits under 35 U.S.C. 119(a)-(d) or (f), or 365(b). Attached is form PTO/SB/02B (for equivalent) listing the foreign applications.

I verily believe the original patent to be wholly or partly inoperative or invalid, for the reasons described below. (Check all boxes that apply.)

☐ by reason of a defective specification or drawing.

☒ by reason of the patentee claiming more or less than he had the right to claim in the patent.

☐ by reason of other errors.

At least one error upon which reissue is based is described below. If the reissue is a broadening reissue, such must be stated with an explanation as to the nature of the broadening:

The patentee has claimed less than it has the right to claim in the patent. The patentee believes it has the right to claim a radiation-curable composition comprising at least one radiation polymerizable compound, at least one filler material, at least one photoinitiator for polymerization, and an organic viscosity stabilizer material in an effective amount to delay or prevent a significant increase in viscosity of the overall composition. In addition, the patentee believes that it has the right to claim a radiation-curable composition comprising at least one radiation polymerizable compound, at least one filler material in an amount effective to delay or prevent a significant viscosity increase of the overall composition, and at least one photoinitiator for polymerization.
